

DHARSAN RAMESH

Senior Staff Security Engineer - DevSecOps & AI-Security

PROFESSIONAL PROFILE

A Senior Staff Security Engineer with over 9+ years of experience in Cyber security, Cloud security, Software Security, Information Security and Network Security. Recognised for consistent performance, excellence and contribution to success in the cyber security industry. Strengths in security monitoring, threat intelligence, log analysis, incident response and DevSecOps. Also providing detailed incident report on Security incidents, Responsible for developing and maintaining Security Architecture, Framework, Policies and Procedures. Also trained in cloud and software based cyber security technologies like AWS, Azure, GCP and Alibaba platform. Enthusiastic analyst eager to contribute to team's success through smart work. Attention to detail and excellent organisational skills. A clear understanding of Software, Cloud, and Cyber security, and well trained in DevSecOps architecture

WORK EXPERIENCE

JumpCloud

Senior Staff Security Engineer - DevSecOps & AI Security (Architect)

June 2024 - Present

- Design, implement, and maintain a secure and resilient cloud architecture, encompassing Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS) solutions. This includes Azure, AWS, GCP, and all manner of SaaS applications.
- Design and build continuous audit and alerting capabilities in our cloud environments using native toolsets.
- Develop and implement robust identity and access management strategies for cloud environments, ensuring proper authentication and authorization controls. Monitor and manage user access permissions, following the principle of least privilege.
- Lead incident response efforts for security incidents, coordinating with internal and external stakeholders.
- Implement logging and monitoring solutions to detect and respond to security events in real-time.
- Design and drive implementation for anti-abuse detection and action systems, to protect All Cloud-Infra and Jumpcloud products.
- Produce software design proposals and scope the level of efforts to set time bounded goals for teams to agree on and implement.
- Drive enterprise focused security improvements to Jumpcloud products and services.

Vancouver BC ,Canada

EDUCATION

- B.E Computer Science & Engineering (2014 - 2018)
-Anna University
GPA (7.8)

EXPERTISE

- Security Monitoring
- Incident Response
- Threat Intelligence
- Cyber Threat Analysis
- Threat Detection
- Forensics & Malware Analysis
- Security Operation Center
- SIEM
- SOAR
- Threat Hunting
- DevSecOps
- Cloud SecOps
- Software Security
- Owasp Top 10
- Cyber Kill Chain & MITRE ATT&CK
- SOC 2 , ISO-27001, GDPR & PCI DSS

SKILLS

- SAST and DAST
- Incident Management
- Vulnerability Management
- Penetration-Testing
- (Web, Mobile and Cloud)
- Malware analysis
- IDS & IPS
- Reverse Engineering
- Risk-analysis& mitigation
- Security analysis
- Advanced Persistence Test (APT)
- LAN & WAN
- Wireless LAN
- DHCP, OSPF, BGP, DNS
- Firewalls
- Internet protocol suite (TCP/IP)
- Switches: STP,NAT,ARP,NAC,PAT
- IPSec
- VPN
- Email Security
- Secure SDLC

SIEM & SOAR

- Qradar
- Splunk
- Azure-Sentinel
- LogRhythm
- Wazuh
- Security-Onion
- IBM-Ressilient
- Forti-SOAR
- SUMO Logic
- SolarWinds
- Exabeam

EDR , NDR & EMAIL SECURITY

- Sentinel One
- Crowd Strike
- Microsoft defender
- Mimecast
- Bitdefender
- Carbon Black
- Cloudflare
- Smokescreen
- IBM X-Force
- Darktrace
- Fortinet
- Proof Point
- G-Suite Email Security

- Perform security reviews, research, and reproduce vulnerabilities, design secure protocols and systems, and write tests.
- Design, implement, and secure defaults for our internal users, including IAM, SCPs, Secrets Management, Logging, Monitoring
- Document cloud infrastructure designs, patterns, and configurations so they can be effectively adopted
- Partner with Cloud, Technology, and Development teams to implement and maintain secure configurations, guardrails, and alerts for our cloud environments
- Deliver using efficient, reliable, and scalable methods including automation, testing, and monitoring
- Collaborate across the business to remediate security issues and risks
- Lead and coordinate response to security incidents, investigations, and alerts
- Defined and enforced organizational AI security policies for safe internal adoption of LLMs, AI code generators, and AI-powered SaaS tools balancing developer velocity with security guardrails aligned to SOC 2 Type II and ISO 27001 compliance requirements.
- Conducted threat modeling for AI/ML-integrated services and agentic workflows using OWASP LLM Top 10 (2025) and MITRE ATLAS frameworks identifying attack surfaces including prompt injection, indirect prompt injection, RAG poisoning, model data exfiltration, and agent hijacking.
- Planned and executed adversarial security testing against LLM-integrated services and AI/ML model endpoints covering prompt injection simulations, jailbreak testing, model manipulation, adversarial input attacks, and data extraction scenarios targeting generative AI systems.
- Evaluated AI Security Posture Management (AISPM) solutions including Wiz AI security capabilities assessing ML pipeline exposure, model access controls, data classification, and supply chain risk across multi-cloud environments (AWS, Azure, GCP).
- Built AI-specific SIEM detection rules and incident response playbooks targeting emerging LLM attack vectors (prompt injection, LLM data exfiltration, tool-call injection), integrating with Datadog and cloud-native security stacks.
- Conducted security reviews of third-party AI connectors, plugins, and Model Context Protocol (MCP) server deployments evaluating authentication, authorization, data flow controls, and supply chain risk through structured approval pipelines.
- Designed DLP controls for AI environments including tenant restrictions, data classification policies, and prompt injection mitigations to prevent sensitive data exposure through LLM interfaces and AI-powered development tools.
- Hardened CI/CD pipelines for AI-assisted development workflows implementing dependency scanning, SAST, secrets management, and security gates for LLM-integrated development toolchains and vibe coding environments.
- Performed security code review of AI/ML application code and LLM integration layers identifying vulnerabilities including insecure output handling (LLM02), insufficient input validation, excessive agency (LLM08), and model access control bypasses. Designed secrets management architecture for AI agent credential handling implementing dynamic short-lived API key provisioning, per-agent scoped

SAST & DAST

- Veracode
- Rapid7
- Owasp Zap
- Tenable (Nessus)
- SonarQube
- Sonar-Cloud
- Qualys

NETWORK SECURITY

- CISCO VPN
- Imperva Cloud WAF
- Aruba Central
- Airwave
- Network Management Softwares
- (IMC, GMS, PCM)
- Wireshark and TCP dump
- Kali Linux (OS)
- Veil Framework
- Metasploit
- Open Stack
- Burp Suite
- Clear Pass (Cloud Based Security Policies)
- Fiddler
- Charles - Web Proxy

CERTIFICATIONS

- CCNA R&S
- CCNA Security
- CEH-V11
- Aws Security Speciality
- Microsoft-Certified: Security-Operations Analyst Associate
- Microsoft-Certified: Cybersecurity-architect-Expert

PROGRAMMING & SCRPTING

- Python
- Bash
- Linux
- Anisble
- Terraform
- Salt Stack
- KQL

- Embedded security into the product development lifecycle (PDLC) by instituting security design reviews as a mandatory gate at the architecture phase eliminating classes of vulnerabilities before code is written across 10+ engineering teams.
- Architected the security framework for JumpCloud's AI gateway layer designing authentication, authorization, rate limiting, and content inspection controls that sit between internal consumers and upstream LLM providers (OpenAI, Anthropic, AWS Bedrock) enforcing tenant isolation, credential scoping, and audit logging at the gateway boundary.
- Led security architecture review and threat modeling for Agent 0 JumpCloud's internal agentic AI system defining trust boundaries between agent orchestration, tool-call execution, and privileged API access layers. Designed least-privilege tool-use policies, scope-limited credentials, and audit trails for all agent-initiated actions to prevent lateral movement and privilege escalation through agentic workflows.
- Designed and enforced a Zero Trust security model for AI product components applying identity-based access controls, mTLS between microservices, short-lived credentials for model API calls, and continuous authorization checks at every agent decision boundary, eliminating implicit trust in LLM-orchestrated workflows.
- Defined the secure API design standard for AI-integrated product surfaces establishing input validation schemas, output sanitization requirements, context-length controls, and rate limiting tiers to prevent prompt injection, context window abuse, and model denial-of-service across customer-facing AI features.
- Designed the runtime security observability stack for AI product components integrating prompt-level logging, anomaly detection on agent decision sequences, and behavioral baselines for LLM API consumption patterns into Datadog

Exact Payments

Cyber Security Specialist (DevSecOps) - Cloud and Software

April 2023 - Jun 2024

- Secure design, architecture, and implementation
- Secure development life-cycle (SDLC) practices including threat modeling and security testing
- Eliminate classes of infrastructure security problems by shifting the detection and preventions left into the development workflow
- Provide architectural, design, and threat-based guidance to software development teams to improve the security maturity before code is written
- Cloud Architect in advanced, large scale, technology systems
- Familiarity with shift-left security practices, Robust micro services programming (AWS Lambda, Docker, ECR and Kubernetes etc.)
- Extensive experience architecting, designing, and programming applications and ample experience in high-level programming languages such as TS, JS, Python, Terraform
- Influence decision-makers and stakeholders to achieve a consistently high security bar
- Conduct network and/or application penetration testing
- Create security guidance and documentation,Develop security tools and automation
- Responsible for Building EDR , MDR and XDR from Scratch (SIEM, End-Point security and Security Automation)

CI/CD

- Jenkins
- GitHub Actions
- Travis CI
- AWS Pipeline
- Circle CI
- Azure CI CD Pipelines

DevOps - Tools

- Prometheus
- Nagios
- Docker
- GitHub
- Kubernetes
- JFRog Artifactory
- Prowler
- IaC - Terraform
- Jira

SOFTWARE SECURITY

- Force-Point PII Scanner
- Zed-Attack-Proxy(OWASP)
- Postman
- WebGoat from OWASP
- IBM Security AppScan
- Fortify
- Checkmarx
- Apigee
- Kubernetes-Security (Tigera)

DEVSECOPS - SECURITY

- Datadog
- Sysdig
- Kibana
- Prometheus
- Grafana
- EKS
- Istio
- GKE

THREAT - INTEL

- Flare
- Cloudsek
- flashpoint
- Mandiant
- WIZ

- Develop and deliver security training and outreach to internal development teams
- Lead security projects (including security reviews, tool development, and creation of new security practices) with end-to-end ownership
- Support for mentoring, team building and Closely work with DevOps Team
- Good understanding of infrastructure, operating system and application vulnerabilities, security architecture, and controls and improve infrastructure security maturity at scale by directly designing, implementing, and building solutions
- Implement Latest technologies and frameworks used in penetration testing, security event analysis, incident response, computer forensics, network and endpoint architecture, or other SecOps areas.
- Creates a detailed dashboard for the cyber threat landscape.
- Ability to successfully interface (verbal and written) with clients in a concise manner while managing expectations at executive and technical levels.
 - implementation of technologies used for enterprise security. Provide expert advice on best practices for managing the cyber security risks during digital transformation as organizations adopt cloud, DevOps, and new architecture frameworks (e.g., containerization, microservices, and zero trust).
- Provide guidance on building/transforming cyber defense programs including incident, crisis management, threat hunting, threat intelligence, and detection development.
- Conduct security reviews and maturity assessments across technology, business teams to address cyber risk, and provide clear and organized risk findings/recommendations to clients.
- Familiarity with compliance frameworks such as PCI-DSS, SOC2 Type 2, ISO 27001, HIPPA, GDPR, and CCPA

Nanoprecise Sci Corp

Security Architect (DevSecOps) - Cloud and Software -Lead

September 2021 - April 2023

- Actively looking for security vulnerabilities in our application and network, reporting issues and describing possible solutions.
- Designing and maintaining our security infrastructure (AWS, Sentinel-one).
- Stay up to date with security news, keeping an eye out for the latest vulnerabilities and remedies emerging in the field.
- Actively liaising with the development team to ensure a secure architecture.
- Providing regular reports auditing our current services and latest changes, as well as our internal practices.
- Monitoring the network and providing early warning of abnormalities or problems.
- Preparing reports and action plans in the event of a security breach.
- Upgrading systems regularly to remain competitive in the field of security.
- Communicating the system status and keep users informed of downtime or changes to the system.
- Securing networks through firewalls, password protection and other systems.
- Conducted training to all other team members when needed.
- Responsible for leading SOC 2 compliance and ISO 27001.
- Building and reviewing security terms & conditions for clients.
- Analyzing & testing VAPT for AWS, Web & mobile app and Network infra.

INTERNAL DEVELOPER
PLATFORM- TOOLS

- Backstage
- Atlassian Compass
- Spacelift
- Argocd
- Cortex
- Appvia
- Mia-Platform
- Qovery
- Bunnyshell

GOOGLE SECURITY STACK

- GRR Rapid Response
- OpenRelik
- Timesketch:
- osdfir-infrastructure
- Forseti Security
- log2timeline-dftimewolf

AISPM & AIDR

- Lakera Guard
- HiddenLayer
- Mindgard
- Protect AI
- ModelScan
- Pillar Security
- Operant AI
- Lasso Security
- Robust Intelligence (RIME)
- CalypsoAI
- Securiti AI
- Nightfall AI

LLM RED TEAMING & TESTING

- Garak
- PyRIT (Microsoft)
- Promptfoo
- PromptBench
- DeepTeam
- Burp Suite AI extensions
- LLM FuzzerARTKIT

AI MODEL SECURITY TOOLS

- IBM-Adversarial Robustness Toolbox (ART)
- Foolbox
- CleverHans
- ML-Privacy-Meter
- TextAttack
- Alibi Detect

- Responsible for handling Cyber-Security Assessment from Clients
- Expertise in Application Security program (DAST and SAST) at the enterprise level to identify, report and remediate security vulnerabilities from applications deployed in DEV and PROD environments.
- Designed and Developed Security Incident and Event Management Architecture for Nanoprecise Sci Corp.
- Implemented Incident response Plan Specific To Nanoprecise Sci Corp Technical Stack, Also Develop UseCases based on KQL queries for Azure Security Stack
- Created and maintained Information Security plans and procedure specifically for Nanoprecise Sci Corp
- Trains Developers and Testers Based on Owasp Top 10 (Web and Mobile Apps)
- Develop and Maintain Secure CI/CD pipeline for Secure SDLC

SecurityHQ

Senior Security Analyst - Lead

June 2021 - September 2021

- Security monitoring, detection, and analysis of events.
- Log analysis on security and network devices.
- Incident Response: Identification, containment and eradication of incidents generated by SIEM.
- Strengthening Threat Intelligence capabilities to integrate to existing detection tools.
- Performed Server and Endpoint forensic investigations.
- Worked on Machine learning models incorporating security analytics.
- Associated to handle security incidents reported by the external security researches for bug bounty and addressed other security incidents of categories; Zero day Attack,Vulnerabilities, Trademark Misuse, Unwanted Social Content Takedowns, Phishing Attacks, Service Compromises, Denial of Service Attack, Product Based Security and Supply Chain Security.
- Researching new detection techniques for new threat landscape and implementing them.
- As a Lead, also responsible for managing SOC 0.5,L1 & coordinating with L2.
- Handling major offences in Q-Radar on client environments.
- Performing Threat hunting and Malware analysis in EDR solutions.
- Correlate Indicators of Compromise (IOC) within large data sets
- Research new detection techniques to enhance the security solution effectiveness
- Development new and novel detection mechanisms, Use Case, IOCs & signatures
- Identify new and emerging trends in threat actors Tactics, Techniques & Procedures (TTPs)

Aruba Networks a Hewlett Packard Enterprise company

Technical Solution Consulant (Wireless, Cloud) - Security

July 2019 - June 2021

- Analysis and define network requirements , optimization and support the ARUBA HPE products like Routers & Switches, Data-center storage devices, Mobility wireless controllers, Access points, Clear pass (Cloud and security policies) and Aruba Central & Airwave (Monitoring + Threat detection cloud based software)
- Applied deployment best practices and proper security protocols in network management.

CLOUD AI SECURITY & GUARDRAILS

- AWS Bedrock Guardrails
- AWS SageMaker Security
- Azure AI Content Safety
- Azure Prompt Shield
- Azure OpenAI Service
- Google Vertex AI Safety
- Google Gemini API
- Microsoft Purview AI Hub
- Guardrails AI
- NVIDIA NeMo Guardrails
- LlamaGuard (Meta)
- Anthropic Claude API

AGENTIC AI & MCP SECURITY

- MCP Server Security
- LangChain Security
- LlamaIndex Security
- CrewAI
- AutoGPT Security
- Agentic AI Security
- Tool-use Security
- RAG Security
- Vector DB Security

AI SECURITY FRAMEWORKS

- OWASP LLM Top 10 (2025)
- MITRE ATLAS
- CISA AI Security Guidelines
- (AI-BOM)
- Google SAIF

AI ATTACK TECHNIQUES - THREAT PREVENTION

- Prompt Injection
- Adversarial ML
- Data Poisoning
- Training Data Poisoning
- Model Inversion Attack
- Model Extraction
- Model Stealing
- RAG Poisoning
- Agent Hijacking
- Tool Call Injection
- LLM Data Exfiltration
- Insecure Output Handling
- Excessive Agency
- Model Denial of Service
- Supply Chain Attack on ML

- Collaboration with cyber security incidents based on network devices and report issue. Manage project deliverable and provide status report.
- Analyze, Troubleshoot and enhanced network performance to drive efficiency.
- Prepared operational reports, including trouble resolution and analysis, project status, equipment and network requirements.
- Recommend improvement in security systems and procedures.
- Worked on sales force and incident now CRM for client documentation and exceeded the support for enterprise level also coordinate with network engineers to resolve the issue.
- Troubleshooting and configuring ARUBA HPE products like Routers & Switches, Data-center storage devices, Mobility wireless controllers, Access points, Clear pass (Cloud and security policies) and Aruba Central & Airwave (Monitoring + Threat detection cloud based software).
- Configure and maintain Comware switches and data centre VMs.
- Working in the SOC environment & coordinating with the blue team and Red Team

Cisco systems

Network Security - Technical Solution Engineer

January 2019 - July 2019

- Set up hardware and software in optimal configuration meet network performance requirement.
- Converted community contacts into potential clients through networking consistency and credibility.
- Followed quality standards and procedures to minimize errors and maximize customer satisfaction.
- Worked in ticketing tool incident now on the SLA basis
- Helped the employee and end user in CA and MDM certifications and Authentication, Authorization and Accounting policy based profile (Core profile authentication).
- Designed and implemented networks in collaboration with project engineers.
- Upgrading network software and hardware for optimized performance.
- Configure and install controllers, Firewalls and switches .
- Regularly Monitor and Work on System Center Operations Manager

Tekzie Enterprise solutions

Network Security Engineer

January 2018 - January 2019

- I developed my skills by working with this organization started as L1 network support engineer. Supported the us clients for direct TV, Comcast, Spectrum and AT&T basic network troubleshooting.
- Troubleshoot/Diagnose all level 1 and 2 issues from the customer and driving satisfactory resolution of the issues.
- Troubleshoot product codes and configuration issues ensure consistent customer satisfaction.
- Document all communication with customer in the CRM, Interact with international customer.
- Timely handoff (Escalation) of cases to L2/L3 TAC.
